

# Anabec

**BETTER CHEMISTRY. SUPERIOR RESULTS.**

## ABOUT HEALTHY INDOOR SOLUTIONS

Healthy Indoor Solutions is a subsidiary company of Moldcare. We have extensive training and many years experience in mold and microbial remediation, cleaning, disinfecting, rebuilding, and restorations. For the past 5 years we have only used Anabec products for all of our projects and have experienced excellent results. Healthy Indoor Solutions is a proud Distributor of Anabec products in Canada.

## ABOUT ANABEC

In 1993, Anabec developed their Advanced Cleaning Solution. This product has proven to be the premier non-toxic microbial cleaner in the industry in the USA and forms the cornerstone for the Anabec Product Systems. From that starting point, Anabec has continually introduced innovative products to the cleaning, restoration, microbial remediation and prevention marketplace. Anabec was a pioneer in the emerging indoor air quality industry, being the first company to promote the cleaning of a surface of organic debris prior to applying a protectant for long-term protection from microbial re-contamination. Anabec continues to be innovators in the industry with their introduction of Anasphere Plus.

## WHAT MAKES ANABEC ANASPHERE PLUS UNIQUE?

Anabec Anasphere Plus is a Hospital grade pH neutral (same pH as pure water), phosphate free, disinfectant, fungicide, mildewstat, and virucide containing no acids. It is an EPA registered disinfectant that has an impressive 140 plus kill claims, which in itself makes this product stand out from most others.

The Anasphere formula is engineered to be positively charged, whereas cells of all bacteria, fungi, and viruses are negatively charged. This allows Anasphere Plus to attach to the negatively charged outer cell walls of microbial pathogens to more effectively destroy them.

Anasphere Plus has undergone extensive testing to verify the effectiveness against a wide range of pathogens including: Enveloped and Non-enveloped Human and Non-Human Viruses, Gram Negative/ Gram Positive Clinical Bacterial Isolates, Environmental and Pathogenic Fungi and Antibiotic Resistant Gram Positive and Gram-Negative Bacteria.

Anasphere Plus is an Ammonium based Nontoxic quaternary ammonium based disinfectant for interior and exterior hard surfaces. Anasphere Plus has been tested against SARS-CoV-2, the novel coronavirus that causes the disease COVID-19 and found to be effective for a 98% soil load on this virus, whereas the industry standard is 5% soil load. All Anabec products are designed to be most effective while having the smallest impact on the environment.

## ANASPHERE PLUS RELATED TO COVID-19 CORONA VIRUS

Anasphere Plus has been tested against SARS-CoV-2, the novel coronavirus that causes the disease COVID-19. With the COVID-19 Corona virus appearing as a Novel (New) virus so quickly, the EPA was forced to create a list of accepted disinfectants as quickly as possible as it did not have the time or resources to test all disinfectants for this new pathogen. In order for the EPA to provide this essential list quickly the EPA approved hard surface disinfectants products in which demonstrated efficacy (e.g. effectiveness) against a harder-to-kill virus than SARS-CoV-2.

### EPA registered results against SARS-CoV-2, the novel coronavirus that causes the disease COVID-19.

ANASPHERE PLUS is registered on the Environmental Protection Agency's (EPA) list of disinfectants for use in fighting the new coronavirus pandemic. ANASPHERE PLUS can be found on the EPA's List N, EPA Reg. No. 61178-1, meeting the agency's emerging pathogen efficacy requirements. Our Anasphere Plus formula provides an all-in-one Disinfectant, Fungicide, Mildewstat and Virucide product solution for over 140 global pathogens.

Anasphere Plus is engineered to be positively charged which allows the product to attach to the negatively charged outer cell walls of microbial pathogens, ultimately inactivating them. For a product to be EPA Registered as a disinfectant, it must pass efficacy testing for each given virus or microorganism. This test includes exposing the subject strain to the disinfectant and the product must kill over 99.99% of the microorganism to pass.

Often an organic soil load is added to create a more challenging test as organic material on the surface reduces the efficacy of a disinfectant. The industry standard is a 5% organic soil load which simulates slightly "dirty" conditions. Anasphere Plus was tested and EPA registered against the Human Coronavirus at a much higher, more challenging but real world scenario, consisting of 98% soil load.

The achievement of Anasphere Plus to attain EPA registration at a 98% soil load in this testing clearly sets this product apart from other hard surface disinfectants as the industry standard is 5% soil load. Anabec Anasphere is in the top category for the highest number of kill claims as a disinfectant for all pathogens.

Anasphere Plus is proven to eliminate and protect thousands of surfaces from a variety of microbial organisms, including COVID-19 Corona virus, Hepatitis B & C virus, Herpes Simplex type 1 & 2 virus, Aspergillus niger, H1N1, E. coli, Influenza, Listeria, Measles virus, Noro virus, salmonella, MRSA, and HIV-1 (Aids Virus) as well as many other pathogens.

Anabec Anasphere Plus offers the best science the world has to offer and is recognized by Health Canada as a COVID-19 Corona Virus disinfectant. Anabec products are available from Healthy Indoor Solutions for Commercial or Industrial Clients only anywhere within Canada. Anasphere Plus is available in concentrate making this product available at a fraction of the price of most disinfectants. Call or email us for more information.
